News Desk

Software piracy — tapes seized

POLICE in Salford have charged two men with offences in connection with video game piracy.

Over 13,000 copied tapes were seized by police from a Salford warehouse two weeks ago — versions of top selling titles from Psion, Quicksilver, Ocean, Ultimate, Imagine and Durrell.

The two men, Donald Freeman and Stuart Caulfield Aspell, have been charged with criminal deception. Pirated copies of 10 Spectrum games have been discovered after Ocean reported the discovery of a pirated copy of its Kong game. All of the titles were professionally produced copies, with full-colour cassette inserts, hardly distinguishable from the originals. Among the other titles involved were *Flight Simulation* from Psion, *Boogaboo* from Quicksilver, *Schizoids* from Imagine, *Harrier Attack* from Durrell and *Atic Atac* from Ultimate.

One of the distinguishing

features of the copies was the type of cassette used. Rather than being of the welded type the cassettes were of the screw-type, probably of Spanish origin.

As well as being charged with criminal deception, the two accused individuals have been charged with violation of the 1956 Copyright Act. Freeman has appeared in court and

Acorn 6502 second processor

ACORN has finally announced the first of its second processor options for the BBC machine — the units have been on display at shows for over a year.

The 6502 second processor, which Acorn says is available now, costs £199 and gives the BBC owner a second 6502 processor and an additional 64K of memory.

The unit plugs into the 'tube'

ORIC (16&48K) TANDY COLOUR (16K)
DRAGON 32

SKRAMBLE

Actual picture of screen on
ORIC 48K

Your mission is to penetrate the enemy scramble system and destroy their headquarters. You will start with three of our latest spacefighters equipped with repeating cannon and twin bomb launcher.

If you succeed in evading the elaborate ground defences, you will arrive at the Cave where flying becomes more difficult. In the cave are UFOs, after which you must avoid a hail of meteorites. Very few pilots succeed this far, but if you do, then you must enter the Fortress, followed by the Maze. If you manage to destroy Enemy Headquarters, then your reward will be a more difficult mission! One or two player game.

Machine Language, High Speed, Arcade Action. Full colour graphics with sound. Keyboard or Joystick control.

Available on tape for

How to submit articles

Articles which are submitted for publication should not be more than 3,000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here — so please do not be tempted.

Accuracy

Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

Editorial

The computer industry has been talking about joint standards and compatibility for almost as long as it has been in existence.

There has been a lot of talk recently about the Japanese attempts to make MSX Basic a common standard. Now, 12 European companies, including GEC, ICL and Plessey, have agreed to design future equipment to meet existing international standards.

This will have no immediate effect on the home computer industry, which is a very different animal from its professional/business counterpart. The Commodores and Sinclairs of this world are determined to keep their machines incompatible. Indeed, different machines in the same range are even kept incompatible from one another, viz the Vic20 and Commodore 64.

However, Commodore has followed Atari in deciding to write software for competing machines. In addition, Commodore is now marketing the Hyperion, an IBM compatible business micro.

There are obvious advantages to both software writers and micro users in establishing common standards. Each piece of software would immediately have access to a much larger market and far less time would be wasted in laboriously converting programs from one machine to another.

Next Thursday

Next week's star game is *Snakes for the Dragon 32* by Andrew Thompson — a micro version of an arcade classic.

2nd Processor

◀ continued from page 1

high-speed data bus interface on the BBC machine. Most programs will run up to 50 percent faster with the second processor connected. The program is run on the second processor, leaving the 6502 in the BBC itself to simultaneously handle the screen display, Basic, operating system, keyboard, sound and input/output calls. With the 6502 second processor connected, the BBC machine has 60K of contiguous programming space — including 44K available to Basic — regardless of display mode.

Acorn plans to follow the 6502 unit with the Z80 second processor in June. The Z80 will be offered complete with CPM operating system disc and software.

Bad news, however, for those looking forward to Acorn's third second processor option — the 16-bit National Semiconductor 16032 device. This option has receded still further and is unlikely to appear this year. Chip availability problems have been blamed, although Acorn says it is determined to continue with development of the product.

To complement the launch of the 6502 option, Acorn has announced a development of the Robocom computer-aided design software package originally developed for the Apple. The system has been considerably enhanced and is implemented on the BBC with twin-disc drive and 6502 processor system using the Bitstick — a kind of glorified joystick.

The sophistication of the Bitstick graphics system is matched by the sophistication of its price — £375.

BBC competitor

OFFICE Equipment manufacturer Triumph Adler is to produce a low-cost competitor to the BBC micro.

The Alphatronic PC is Z80-based with 64K Ram and priced at around £400.

Up to 28K is available for Basic programming and the machine runs a version of Microsoft Basic. It has a full-size professional keyboard with separate numeric pad and six function keys. The machine

Video nasties' Bill to cover micros

THE scope of a Bill being debated by Parliament designed to curb so-called 'video nasties' has been extended to cover video games.

The Video Recordings Bill — if passed, which seems almost certain — will mean that home computer games will have to be classified in much the same way as films are at present. A system of certificates would be imposed, limiting purchase of some games only to those aged over 18 and banning others.

Tory MP Graham Bright introducing the amendment to his Bill, drew attention to TV games showing scenes of sex and violence. In particular, he singled out the *Ship 'o'*

Doom adventure by Artic which includes a rape sequence. A further change due for introduction when the Bill reaches the Lords will extend its powers to include Rom cartridge software as well as tape and disc material.

Under the terms of the Video Recordings Bill, fines of up to £20,000 could be imposed on individuals dealing in unclassified video game 'nasties'.

The Bill, which could become law before the end of the year, would have a far-reaching effect on the software industry. Every program, before it could be published, would have to be submitted to a group similar to the present British Board of Film Censors.

New name for Flan

FLAN has now come up with the title Enterprise Computers as a permanent and trouble-free name for the company.

However, the 64K Enterprise computer will not now be launched until September, five months later than originally expected.

This is due partly to the name change, and partly because the two custom chips used in the computer are not yet fully debugged.

"The de-bugging of the chips is going painstakingly, but well," said marketing manager Mike Shirley. "We would rather bring out a reliable product in September than an unreliable one earlier."

In addition, the 64K machine has gone up in price. Originally, it was to be £199.00. Now it will sell for

£228.85. The increase has been blamed on rising chip costs.

The 128K version of the machine has been delayed still further. It is not now scheduled to appear in Britain until the beginning of 1985. Its price has been set at £299.95.

Enterprise have signed a deal with Welwyn Electronics to manufacture both versions of the computer. The deal will create at least 90 jobs at Welwyn's Tyneside factory.

On the software side, Enterprise has been talking to Psion and Quicksilver, among others, with a view to producing 12 to 15 original programs.

Also being developed are two Basic emulator packages — for Sinclair Basic and for BBC Basic.

Enterprise's most recent identity problem — its third — began in December 1983, when Elan Digital Systems of Crawley, Surrey took action over the use of the name Elan — as Enterprise then was. Elan Computers became Flan as a temporary measure while they made sure they would not have similar problems over the

Tape piracy

◀ continued from page 1

been released on £10,000 bail. Aspell was due to appear in court on Monday March 19.

The arrests are a further indication, if any were needed, that commercial software piracy is now big business.

Doppelgangers

BUG-BYTE is not a company to give up without a fight.

Having lost its top-selling *Manic Miner* Spectrum program to Software Projects, it now plans a version of the game for the Commodore 64 — *Mattie Goes Mining*.

The legal position surrounding the Bug-Byte/Software Projects *Manic Miner* dispute has also been complicated still

Alligator's Blagger

further — Bug-Byte has trademarked the name *Manic Miner* while Software Projects retains the copyright to the game.

Bug-Byte's *Mattie Goes Mining* will not be the only game on the Commodore 64 to develop ideas used in *Manic Miner* — itself a distant relative of *Miner '49er* from the arcades. As well as Software Projects' *Manic Miner* 64, there is already *China Miner* from Interceptor and *Blogger* from Aligata.

Commented Software Projects' Alan Maton: "It is a kind of compliment to Matthew Smith's original *Manic Miner* program on the Spectrum."

name Enterprise.

● Bernard Dinneen wins our Flan competition and a free subscription to PCW. He offered the name Teflon Computers for Flan — because they can't find a name that will stick.

has 110 pre-defined graphics characters and an 80-column text display option. It has a Beep sound facility with only one pitch.

Interfaces include a cassette port, Rom cartridge slot, Centronics and RS232 interfaces and disc interface connection.

QL waiting list still growing

PCW's QL order: Week 9. Still no sign.

Sinclair has not yet decided on the form of compensation to be offered to customers whose

orders have been delayed.

The money gained in interest by Sinclair from our QL order cheque which has been cashed is now over £3.70.

Coded data via telephone

Having read D Tomlinson's letter (PCW 1-7 March) on data encryption, I wonder how many people owning personal computers and acoustic telephone couplers realise they have all the hardware necessary for sending coded data to their friends. It has seemed at times as if the half million computer mags on the shelves are all carefully avoiding this subject.

The key to this idea is developing a program for coding and decoding data. Personally, I would ignore all that one reads about public and private key encryption systems — I don't believe half of it anyway. Disinformation is the name of this game.

It is well known that the most secure encoding system is the one-time pad, where a table of random numbers are used to code a small message of, say, 100 letters. I would suggest it is possible to write a small program to produce a continuous stream of 'pads' which are recorded on two cassette tapes, one tape being carried away to a remote location. You can imagine the number of pads which could be fitted on a C90 tape.

Of course, the pseudo-random number generator of most home computers would be worse than useless for this application — you would have to devise a method of seeding true random numbers into your program. I have often wondered why manufacturers do not put true random generators into their machines, say something based on noise in a diode.

Now, let me turn to the ethics of my suggestion. Realistic people have, I believe, always accepted that messages by post or over the telephone will always be accessible for interception. People have grumbled, but most of us just shrug our shoulders and get on with using these facilities. Now that technology gives us the opportunity to communicate privately, should we embrace it or should we fret about making things easier for criminal elements to form conspiracies?

I believe that we should

embrace this technology for the reason that secret police or, to use the modern euphemism, the security services, have the potential to be the biggest criminal conspiracy of all, if wrongly directed. With all the resources of the state behind them, we should always fear them most of all.

So, I would suggest all amateur programmers should think about developing their own private coding systems and try real-time transmission and reception of coded messages for themselves.

Now, the big question is, does British Telecom have, or will it have, any regulations about sending coded data over the telephone lines?

P Shimmion
8 Selsey Court
Broadfield, Crawley
West Sussex

To the best of my knowledge, there are no regulations covering the transmission of coded data over telephone lines. But, any coupler linked to the telephone system must be British Telecom approved.

10 years after

Thanks a lot for inadvertently losing ten years from my age when you printed my letter (23 - 29 February).

I feel, however, that I must clear my reputation before I am accused of being anti-education. I stated that I have had many hours of amusement, which would have otherwise been wasted doing homework. Somehow, the word was lost in the translation, and ended up as homework! Nobody has given me any homework for quite some time now, but I would not consider it a waste of time if they did. Homework, on the other hand, is quite another matter.

If I can persuade my micro to do the ironing or washing-up for me, then perhaps I will submit the relevant program to you. On the other hand, I think I will tell the national dailies (*The Sun*, for instance?) and sell the idea to the highest bidder. I am sure the Mothers' Union could summon a fair

amount of money, faced with such a prospect!

Thanks for an excellent magazine, which would not be the same without the Automata advertisement. I look forward to that as much as to the editorial!

Gill Hesketh (over 21)
379 Liverpool Road
Eccles
Manchester M30 7HB

I am not quite sure how we lost 10 years and turned homework into homework, but we obviously owe you an apology.

As for persuading your micro to do the washing-up, what you really need is a robot (which is basically a micro with arms and legs). Cheap robots could be here sooner than you think.

A room of your own

In the game *3D Ant Attack* there is an opening on the side of the 'L' shaped amphitheatre, to the right of the city's entrance, which seems impossible to get into. There are three openings in the structure, two of which are linked by a tunnel. However, there is a way of entering the third hole.

After rescuing your partner, you must then stand on top of him/her, directly beneath the opening, and constantly jump towards it. After a while, an ant will come along and bite

"I know the company has been called Samurai, Elan, Plan and Enterprise, but I'm afraid your name escapes me."

your partner, who will in turn jump, giving you an added boost which is enough to enable you to enter the hole.

Once inside, you enter a room which is totally enclosed and seems to have no purpose. It would be impossible to rescue your partner from the room, as you need to stand on him/her to get in. Perhaps someone could write in and tell me what purpose the room serves. I cannot believe it is a bug in an otherwise superb program.

C Penny
120 Hatton Hill Rd
Litherland
Liverpool L21 9JW

Pascal or Forth

In his trenchant comparison of Forth and Pascal with BBC Basic, A Hegedus (PCW 16-22 February) discusses only control structures such as *For* loops, *While-Do*, and *Case*. If one considers also data structures, such as arrays and records, then to my mind the scales come down heavily in favour of Pascal. In particular, the ability to define one's own non-numerical types (eg days of the week), together with the *Record* structure, enables the programmer to construct and manipulate data bases of great complexity in a remarkably simple and comprehensible way.

No doubt there are still some applications for which the speed of Forth outweighs all other considerations, but as processors get faster it is difficult to imagine that a language whose central feature is reverse-polish operations on a data stack will maintain its present level of popularity.

Pascal has its defects, of course, and is not appropriate for every job, but if stands supreme at present in clarity of expression, as shown by its adoption for a wide range of practical and commercial applications, as well as in teaching.

TURN YOUR PROGRAMME UPSIDE DOWN

Now you can add another dimension to your games.
Swap direction, swap functions, confuse your friends.
In fact you can add almost any twist to your games with
Stonechip's Programmable Joystick Interface.

You can also listen to them
with Stonechip's Echo Amplifier.

£24.95

Programmable Joystick Interface. This also enables any Spectrum software to be used with a joystick, irrespective of which keyboard keys have been chosen for function.

Programming is easy using only a single switch. Switch one way to program and another way to play. No tapes to load or links to worry about — all programming is achieved by hardware. Used with Atari-compatible joysticks. Simply plugs into rear expansion port of ZX-Spectrum. No other connections to make, no additional power supply required.

£19.95

Echo Amplifier. How would you like to listen to the sound output from your ZX-Spectrum without ear strain? The Stonechip Echo amplifier can do this for you as well as easing the tedium of saving or loading of tapes and enlarging the range of tape recorder compatibility with the computer. The amplifier has volume control over a range adequate for most uses, and a tone control for harsh or mellow sounds. A switched interface removes the need to swap leads during 'SAVE'ing or 'LOAD'ing. Leads are left connected all the time and the desired function is selected on the three position switch by the user. Use of the 'CUE' facility enables an audio cue to precede the program being 'SAVE'd' on tape, a decided advantage when searching through a multi-program tape. The Echo simply plugs into the Ear, Mic and Power sockets of the computer and does not require an additional power supply. The expansion port at the rear of the computer is left free for use with other peripherals and the unit is housed in an attractive case custom designed to complement the ZX-Spectrum.

Cut-price school offer

COMMODORE has finally come up with its answer to the government's 'micros' in schools scheme – a cut-price offer of its own.

Deliberately designed to coincide with the end of the government scheme, Commodore is offering schools and

colleges throughout the UK the chance to buy Commodore 64s complete with 1541 single floppy disk drives, Logo and Sam's Base for £399.99 per package. This is a saving of £172 over the recommended retail price of £472.

Board games

David Kelly talks to Peter Deutsch and Jon Baldachin of Leisure Genius

Peter Deutsch's company Leisure Genius has, almost without anyone noticing, cornered a unique niche in computer games.

Over four years ago, Peter Deutsch first started trying to get the rights to produce video games based on established board games. And since then he has reached agreement with some of the best known board game manufacturers including Waddingtons and Spears to produce micro versions of their titles.

"We never considered that we had the expertise to design our own original games ideas," says Peter. "Besides, the established games will have a longer life. Just like in the record industry — you have to keep coming up with the new *Culture Club* month after month. But Jim Reeves' records just keep on going year after year."

Board game manufacturers however were initially very hostile to the idea of video versions of their games. They felt threatened by losing sales to the micros and the time when computers first began to take off the toy industry was in the middle of a deep recession.

"The toy industry is a very funny business" says Peter. "Everyone knows the colour of everyone else's underpants — everything is cross-licensed. Someone will do the plastic bits and market it under your name. Somebody else will do another part under their name. It is all very complicated."

"The problem for the board game companies was there was actually a demand for computer versions of board games and the toy companies suddenly found themselves having to take action against software companies who were ripping them off by producing unauthorised versions."

"Toy companies like Waddingtons wanted to keep total control over their games, but at the same time weren't sure if they wanted to become involved in producing software at all."

"If I had been a board game manufacturer two years ago I would have looked at computer games very warily. Games like *Monopoly* have been selling for 20 or 30 years and Waddingtons didn't want to rush into something that might die after a couple of years."

Some toy manufacturers also fought shy of jumping in after Atari and Mattel showed huge losses. For a toy manufacturer to involve itself directly would have been a big risk.

Says Peter: "We offered to take the risk for them — something they were only too happy to let us do."

The first game that Leisure Genius tried to produce was *Scrabble* from Spears. An Apple version was written and demonstrated to the public as long ago as 1982. And that was after two years of negotiations to tie up the contract with Spears. "I think our lawyer commutes to and from Monte Carlo on the fees from that work!" says Peter.

"What we proved with the Apple version of *Scrabble* was that a computer version of a board game could be a success."

Next, Leisure Genius came to a sub-licensing agreement with Psion to produce a Spectrum version with enhanced graphics. That game appeared last June and was very well received both as a game and as a programming achievement.

"After *Scrabble* we were able to talk with Waddingtons and other board game companies and say, effectively — 'we can do the same sort of thing for you'."

The approach obviously worked because Leisure Genius is now working on computer versions of *Cluedo* from Waddingtons, *Kensington* from Whale Toys, *Mastermind* from Invicta and *Mandala* from Future Games.

Leisure Genius is a partnership between Peter Deutsch, who looks after the business side of the company, and Jon Baldachin, who deals with the programming side. The company now has three full-time programmers working mostly on material for the Commodore 64.

John Baldachin, a former IBM programmer, bought his first micro — a Heathkit — in 1977 during a visit to the US.

Following the success of the Spectrum version of *Scrabble* by Psion, Leisure Genius decided to set up its own programming team.

"The first thing we have done" says Jon "is to write machine-code drivers for the Apple IIe and Commodore 64. They give us the same functions available for both machines — a virtual machine environment

— which allows us to write software on the Apple which will run on several machines. It is a similar approach to that if you were writing in C — you would need to produce a C compiler for each machine you wanted to run the code on."

The drivers — around 11K of machine code — are now finished for the Apple and the Commodore 64 computers and Jon and his team are working on *Scrabble*, *Cluedo*, and *Mastermind* for the Commodore 64 which should be finished by mid-April. Then work will start on the Spectrum drivers.

Once John is happy with the presentation and screen layout, the flowcharting of the game can begin. The flowcharts are written from top-down. When this is finished the programming can begin.

Most of the code for *Scrabble* and the other games on the 64 takes the form of 'macros'. These are machine-code routines which are then called by the program. "If you think of Simon's Basic, which contains code that creates extra commands in Basic, then what we have done is to write code which creates extra commands in machine code, called 'pseudo-ops'."

Programmers writing the games need not know how to program the processor in the target machine. Instead, they need to know how to program the common operating system offered by the driver routines.

"I made a decision to go with machine code rather than, say C, because it is faster. Also it is more sophisticated — for one thing the driver routines offer sprites."

"By the end of the year we will be producing an 8086 version of our drivers — we don't have any choice. By that time everything will be 16-bit — Sinclair has made that clear with the QL."

It is unlikely that any of the games will appear, at least in the short term, on the BHC or Electron machines though. Says Jon: "The games are ideal for the BBC machine. Unfortunately the BBC micro isn't ideal for the games. The shortage of memory would mean that writing drivers for BBC and Electron would be a pain."

Leisure Genius (left to right) Mark Stubbs, Peter Deutsch, Chris Harper and Jon Baldachin — producing video games based on established board games.

The Dungeon Builder

Now you can write your own machine-code
GRAPHIC ADVENTURES quickly and easily.

These are ACTUAL screen photographs.

Place Player or Object

CHALLENGING SOFTWARE

Less than human, far more than mere computer

The *Psytron* controls the massive Belula 5 Installation. When the attack comes, it will cope with defensive demands which would leave a human brain unhinged, computer circuits scrambled. Damage in any sector of the base must be assessed and its effect on the fabric of the installation calculated immediately. Human lives will be expended as necessary but if the *Psytron* ever goes down

The Sinclair Spectrum has always attracted the best programmers. It's always had the most innovative software: *Puon Scrabble*, *The Hobbit*, *Jet Pac* and now...

PSYTRON

Ten screens of stunning graphics, animation which makes other programmers gasp, a 20 page booklet of hints, tips and help with the discovery of each of six levels of play.

"How long can you survive the Final Conflict? A true *Psytron* would last an hour and a Sinclair QL goes to the first person to match that feat."

Teeing off to start

Keith and Steven Brain beard the dragon in its lair in this latest collection of software

The general reaction to the original software offerings from Dragon Data was that they were far from inspiring. In fairness to Dragon, we must add that as the Dragon 32 was very rapidly supported by a whole host of independents, the standard expected by the user rose very quickly.

First of the latest batch of software is *Tee-Off*, a golf simulation which takes place in Cowboy Country where cacti rather than trees abound. Of course, the scenario is of only minor importance compared to the playability of the game, but less forgivable is the fact that minimal efforts seem to have been taken to customise the program for the UK market.

On executing the program, you are faced with a virtually unreadable display which is explained away in the booklet as "this is only for people with NTSC TV's, and should be ignored by the owners of PAL 1 TVs, ie UK owners". How much of that gobbledegook is intelligible to the average user, and how much effort would it have taken to simply omit that section of the program?

Having read all these complaints, you might anticipate that we did not like this program, but you would be wrong, as it does take a quite interesting and novel approach to golf simulation. The game is

played entirely with the joystick and you are represented by an animated figure which can walk in the direction chosen. When you feel that you are in the correct position relative to the ball to take a shot, you press the fire button to visibly wind up your swing. When the button is released the club swings back and, if you are lucky, it makes contact with the ball which takes off in the appropriate direction according to your position and strength.

The power put into your stroke ('club selected') depends on the length of time for which you hold down the fire button. There are the usual hazards to avoid and when (or is that it?) you get onto the green, a close-up picture is provided for the final action. Up to four players can be accommodated, but you must wait for the current player to putt the ball successfully, which can be very time-consuming and rather boring for the other players.

Serious golfers may feel that it does not represent as close a simulation of the real thing as, for example, *Salamander's Golf*, but to the non-golfer it offers an interesting game of skill which makes a change from the 'shoot them up' genre. This is one of Dragon Data's cheapest offerings, but we feel that they should have spent a little more on UK customisation.

There are two 'zapping' offerings (both written by J F McGuire and Son) which are unusual in that they are written in Basic and use the original 'Computa-voice' program (included) to provide speech output. The simplest is *Jump Jet* in which you have to defend your airfield against enemy attack and then attempt to destroy the enemy fortress on its island.

Ten skill levels are provided, with control of position and firing through the joystick. Although the screen scrolls to the left as the game progresses, to reveal more of the countryside, the speed at which this occurs would disgrace a tortoise and this program gives a good demonstration

Screen shot from Let's Count

of how poor Basic is for writing arcade-type games!

The title *Jump Jet* is rather misleading as you are not able to carry out the famous 'hovering' and 'vifting' manoeuvres which characterise combat in the *Harrier*. The 'speech' is of the usual relatively unintelligible type and merely repeats screen messages. There appear to be a number of simple ways in which the program could have been improved, for example every time a hit is scored the action stops completely whilst the entire status display is rewritten.

Dragon Data have made much of the compatibility between the Dragon 64 and the Dragon 32, so it is absolutely unforgivable that *Jump Jet* crashes on line 3010 if you try it on the 64! This is because Dragon Data corrected the bug in the *Usr* function in the original 32 Rom, when they produced the new 'bottom' Rom for the 64. Since it is now well known that the bug could easily be circumvented by including a leading zero in the *Usr* call, surely it would have been more sensible to change the manual rather than the Rom. In this case the crash on the 64 can be prevented by editing out the leading zero in the *Usr* call (ie changing *Usr(000)* to *Usr(0)* in line 3010).

The second offering from the same authors operates in a similar way to *Jump Jet*, except that it does not crash on the 64. In *Shuttlezap* you must navigate your shuttle out of a silo, take it into orbit, intercept enemy 'spunkies' and then return to base. But, once again, it shows that Basic is really too slow for complex action games. In any sort of comparison with *Space Shuttle* from Microdeal it comes a very long way behind, and at £12.95 the price seems exorbitant.

One area where the speed of Basic is quite sufficient is in role-playing games, so we had higher hopes for *Viking* (from Prickly Pear again). However, this turned out to be only a slightly souped-up version of the old-hat *Kingdom* theme in which you have to steer your Viking holding in 750 AD to success, by buying, selling, taxing, etc, while avoiding disasters.

This particular program did not seem to have any unusual features and it has little to recommend it over the versions already available more cheaply on 'compendium' tapes, or as listings in magazines. Although

this program might just have been acceptable 12 months ago, the public now expects a much higher standard than this.

The sound capabilities of the Dragon are often criticised by users of other machines, although they are undoubtedly much easier to use than those on most other micros. There is, of course, no 'envelope' command, although it is possible to simulate this to some extent through Basic.

On the other hand, the *Synther-7* machine code program provides very simple, but total, control over sound formation, thus turning the Dragon keyboard into an effective music synthesiser. The screen display is divided into a number of sections. At the top is a representation of a piano keyboard, on which the corresponding Dragon keys are marked. The keys from 'up arrow' to 'clear' are used so that two octaves of notes are available at any one time.

The instructions cover the features of the program rather briefly, but at least explain things by practical 'hands-on' demonstrations. When you first load the program, you find that these keys produce a sound very like that of a real piano instead of the usual asthmatic Dragon croak.

At the right of the display are listed a series of names (eg *Gamba*, *Krumphorn* and *Djinn*) which are described as 'organ stops' but which looked to the ignorant (ie us!) rather like refugees from Tony Bridge's *Adventure Corner*. However, a quick delve into the dictionary revealed that these names do really have roots in mediaeval musical instruments, and experimentation

soon showed how selecting a different stop transformed the sound output.

A major feature of *Synther-7* is that it also provides a true *Adsr* envelope, which can be very simply tailored to your particular taste. The rest of the display consists of a series of histograms, which show the current state of a wide range of different parameters that influence the final sound—defining envelopes here is certainly much easier than it is on the BBC. As the sound output comes not only through the TV speaker but also through the cassette microphone lead, it is possible to record your efforts directly onto tape.

Perhaps we should make clear that this program is a very different animal to the *Computer* program reviewed in an earlier edition of *PCW* as you can only create and

record in real time, and chords are not possible. It must therefore be viewed as a musical instrument, rather than as a utility for adding music to other programs. It is an interesting program, especially with the excellent graphic display of the sound parameters, and it certainly provides a very good way of learning about, and experimenting with, sound synthesis.

Finally in this selection are a pair of learning programs written by Applied Systems Knowledge Ltd. The first of these *Let's*

Synther 7 — music machine

Count introduces the 3 to 7 year old to simple counting with the aid of a number of graphic games and various skill levels and rewards. The program is in two sections and the whole loading procedure takes about three minutes. It is clear that a lot of thought (and presumably educational expertise) has gone into this program and the instructions sensibly suggest that the child must be shown how to work the system by someone older at first.

Four different games are available. In the simplest *Treasure Island* you have to count the number of shields on the side of a ship and the numbers of chests shown on different islands, and move the ship to the island with the matching number. The program is well designed for small children as only the minimum number of keys are used, and all text is in lower case.

All movement is produced by simply pressing the spacebar and when you have decided that you have reached the correct location, you just press *Enter*. A friendly 'hand' symbol is used to indicate that you need to press the spacebar to continue, and the sound output varies from 'What shall we do with the drunken sailor' to 'Song of the Volga Boatmen' according to your performance.

In the second game *Space Stations* actual numerals are introduced and you must match the number of windows on a spaceship with the numeral which appears on a space station. In *Roll-A-Ball* you must sort a series of numbers into ascending order, and are rewarded by a rolling ball and a rising score stack.

In *Which Way*, you have to decide whether the number of green balls is greater than, equal to, or less than the number of blue balls displayed. At first we were irritated to find that we had to reload the program to change the game, but we

soon discovered that this was due to an omission from the manual rather than from the program. In fact, pressing *Shift* and 'left arrow' takes you straight back to the main menu.

The second offering was *Cranky* which is designed for an older age range (7-11) and introduces number patterns and relationships. The plot is built around a pocket calculator, some of whose circuits have been damaged by rain. The display first indicates the pattern of the offending circuits in *Cranky's* eyes, and then the same pattern is shown in detail on a 10 x 10 grid containing the numbers from 1 to 100 in sequence. All you have to do to make repairs is to make suitable additions and subtractions to move from one number to the next.

There is, however, one small problem — you are only allowed to use the numbers 5 and 3 and therefore some fiendish mental gymnastics are often necessary. At first sight the problems look very simple, but we soon found out that looks were deceiving and had great difficulty getting the correct answers every time when we were faced by complex shapes!

Overall, both of these educational programs are certainly as good as, if not better than, most of the competition in the educational sector. It is nice to see that the limitations of youngsters have been recognised and that, for example, the same series of commands and prompts are used in both programs. It is inevitable that educational programs are more expensive than simple games as the potential sales volume is much lower.

Conclusions

On the specialist side, *Dragon* have clearly added some useful programs to their range, but their efforts on the straight games side are much less successful. Software is only a sideline to *Dragon*, and specialist software houses know only too well that most of the real money is to be made from popular games. It is, therefore, not too surprising that they have been unable to lay their hands on material which can compete on equal terms with the excellent games programs produced for the *Dragon* by the independents.

Our final word must be a plea to *Dragon* to spend a little more time on careful and detailed checking of the contents of pretty new boxes before they are released.

CHALLENGING SOFTWARE

Catching the bus

Boris Allan looks at registers and counters in the Motorola microprocessors in the second of a three part series

We are told by Sinclair Research that the QL has "all the speed and power of 32-bit processor architecture". Sinclair Research refers to the Motorola MC68008, and last week we saw that the claim was possibly confusing.

The 32-bit processor architecture of the MC68008 consists of 17 32-bit registers, two 32-bit stack pointers, a 32-bit program counter, and a 16-bit status register.

For comparison, the Intel i8088 processor (used for the IBM PC) has 16-bit internal registers, as does the Motorola MC6809 processor (used for the Dragon and the Tandy Color computers). Both the i8088 and MC6809 have 8-bit data buses, yet the first is accounted a 16-bit chip and the second an 8-bit chip.

The MC68000 series are the only microprocessors for which it can be said that all registers are 32-bit; the closest to this, the National Semiconductors NS16000 series has eight 32-bit registers, and an almost equal number of 24-bit pointers.

The examination of the MC68000 registers has to start with the programming model (see diagram), and there is no difference between the register architecture of the MC68000 and the MC68008. More complex versions of the MC68000 series (ie. the MC68010 AND MC68020) have slightly differing architectures. I repeat what I said last week: the only difference between the MC68000 and MC68008 is that the first is quicker but the second is simpler to use with conventional gadgets.

The first eight registers are data registers (D0-D7), used for byte (8-bit), word (16-bit), and long word (32-bit) operations. The MC68000 instruction set contains instructions for hardware multiplication, and division of 16-bit and 32-bit numbers.

Each data register is 32 bits wide; byte values occupy the low order 8 bits, word values the low order 16 bits, and long words the entire register. Bit 0 is the rightmost/least significant bit, while the most significant/leftmost bit is designated bit 31. If the register is being used for a byte operation, for example, only bits 0 to seven are modified; the other bits remain unaltered.

The data registers can also be used as index registers, as can the next eight registers (A0-A7). The first seven of these registers (A0-A6) are address registers, and only recognise 32-bit values (that is, long words). Sometimes word values are implied by operations, and thus the low order word is used, but only after the high order word is modified to maintain the correct sign.

These registers can be used as software stack pointers and as base address registers (a base address register is the lowest numbered location in an area of storage, eg the beginning of a table in memory). The system stack pointer (A7) can also be used for such purposes, but it has many other uses.

The MC68000 allows the creation of user stacks and queues by use of the system stack pointer. The system stack pointer is either the supervisor stack pointer (SSP) or the user stack pointer (USP), depending upon the value of the S bit in the status register. The state (either 'supervisor' or 'user') determines which operations are legal.

The 'privilege' state system is a means by which security can be provided in a computer system, and it works by allowing most programs to execute in user state.

In this system, the accesses are controlled so that the effects on other parts of the system are limited — essential in multi-tasking. The operating system executes in the supervisor state, and has access to all resources, performing housekeeping tasks for user programs.

Bytes within memory are individually addressable, with the high order byte of a word having an even address, which is also the address of the word. The low order byte

has an odd address which is one higher than the word address (this may seem back to front, but it is worth remembering that stacks on the MC68000 series fill from high memory down.)

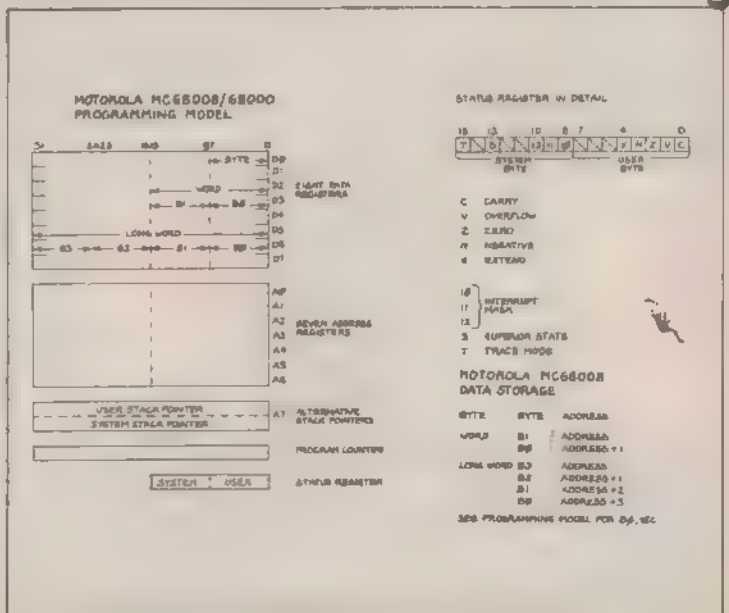

Instructions and multiple-byte data are accessed a byte at a time, in groups corresponding to the data type. For example, in the word read cycle, the byte at the even address (ie. the most significant byte) is read first and then the byte at the odd address one higher (the least significant byte) is read.

Whereas with MC68000 reading a word required four distinct states, for the QL's MC68008 there are eight distinct states (ie approximately twice as slow at accessing data). Given various comparison timings, it seems as if the MC68000 is about twice as fast as the MC68008, but the MC68008 is at least as fast as the i8086 (and far quicker than the IBM PC's i8088).

After the 32-bit program counter, there comes the 16-bit status register, which is split conceptually into two bytes. The user byte has five flags, four of which (negative, zero, overflow and carry) are fairly common.

These are a smaller complement than the flags on many 8-bit processors, and only the fifth (extend) is uncommon. When machine code is examined next week the meaning of these flags will be clearer.

The other half of the status register is the system byte, with five flags. Three bits are used to define the current interrupt level, so that any interrupt of level higher than that given will be recognised. The other two bits indicate whether the processor is in trace (T) mode or in the supervisor state (S).

SPECTRUM OWNERS! NOW AVAILABLE

FOX ELECTRONICS LTD.

THE ULTIMATE IN JOYSTICK INTERFACES

THE FOX PROGRAMMABLE INTERFACE — AN INTERFACE WITH:

- ★ Complete compatibility with all programs.
- ★ In-built memory to store up to 16 different games keysets in one time.
- ★ Battery back-up so no loss of memory after power off.
(Battery recharged during use so no replacements are required).
- ★ One switch only for simplicity of use.
- ★ Full casing
- ★ Through port for further expansion.
- ★ Proven compatibility with the microdrive.
- ★ Built-in pseudo Rom facility with Rom for personnel tool.
- ★ Compatible with all Atari-type joysticks

The superior interface without awkward trailing leads. Just plug in and start your game.

LAUNCH PRICE ONLY £34.95 INCL

Or as a special offer buy the interface and either of the two joysticks below for £42.50 incl

ONLY 48k SPECTRUM UPGRADES £21.00

INCLUSIVE (Issue 2 machines only)

A high quality kit in a new low, low price which simply plugs into existing socket within your Spectrum, no soldering is required and step by step instructions are supplied.

PROBABLY THE BEST KIT AVAILABLE AT DEFINITELY THE LOWEST PRICE. 16K TO 48K IN ONE EASY STEP.

Painting by numbers

Simon Pithers presents a graphics drawing and painting program for the BBC

This program, called *BBC Graphics Pad*, is written for a BBC Model B and uses most, if not all, of the available memory. I have tried to make it as flexible as possible and have added a procedure to allow your picture to be screen dumped to a printer.

The program should work normally on all versions of BBC Basic as I have already tried it on Basic I & II. For users with O.S. 1.0 or below, line 190 should be replaced as in the Rem statement.

This program has been split into two halves. The second half will be printed next week.

Program Procedures:

PROCscreen — This Procedure sets up the MODE 2 screen.
PROCkeywords — This prints the utility keywords in the left hand box.
PROCinput — This asks the user to enter a choice.
PROCmovecursor — This allows the user to move the pen around etc.
PROCclearspace — This clears the left hand side box.
PROCwait — This makes the computer wait for about a second.
PROCcircle — This allows the user to draw a full or empty circle in any colour.
PROCsav — This allows the user to save the picture.
PROCload — This allows the user to load back the picture.

```

Super 3D arcade action Invaders will test your skill and 3D co-ordination to their limits. 8 nipping colour invader screens of increasing difficulty with keyboard controlled 3D laser movement and fire sequence. (Brain required) £6.95

Oricle (Smart Oric)

Hours of family fun. Oric gets smarter the longer you play, eventually you will have no secrets. Be careful what you say. £6.95. Also in French.

Mystery Tower

Superb musical arrangements. 47 different rooms. 3D and colour make this adventure game most enjoyable. You will certainly get lost, or forget where you're going. £6.95. (Also in French).

Flight simulator

Flight Simulator

With airspeed, radar ground/vertical flight path indicators, artificial horizon and altimeter with continuous light monitor on engine condition, stall speed etc., full colour. Hi-res graphics. 3D and sound. £6.95

Space Crystal

Space trading adventure game. Fascinating 3D space travel on your voyage in search of the illudium crystal. Black holes, meteorite storms, Space pirates, etc. Full colour and sound. £6.95. Also available for Dragon 32, Spectrum and Commodore 64.

QUARK DATA P.O. BOX 61, Swindon, Wilts. Tel. (0793) 40661.

A little byte music

This is the second part of Richard Barton's program for the Commodore 64, which demonstrates all the facilities of the SID chip. The first part was published last week.

The listing below is self-explanatory, and Rems are used to clarify the various sections of the program.

Ms Hortense

MELBOURNE

The H.U.R.G. competition offers you over £3,000 of prizes for your game designs without the need of any programming knowledge! Only H.U.R.G. gives you the chance to earn royalties from programs based on your ideas — it's the easiest way to join the software revolution without having to learn how to program!

But you will have to hurry to win the £3,000 prize as the competition closes on April 30, 1984. It's so easy you owe it to yourself to enter your game ideas. Games will be judged on the basis of originality, graphics and playability. Further details are available with every copy of H.U.R.G.

Whether you want to share your game ideas with the world at large or just with your friends and family, H.U.R.G. is the game design program for you. At last, the games you imagine can be the games you play!

HIGH LEVEL — requires no programming skills — simply design the shapes you want, and H.U.R.G. will animate them into the most amazing on-screen action you've ever seen. Choose any setting for your game, from mazes to outer space or sinister caverns — the only limit is your imagination.

USER FRIENDLY — H.U.R.G. will lead you through a series of easy-to-follow procedures, ending in the creation of a game that is as wild as your imagination.

REAL TIME — You can see exactly what you're creating at all times. Every game has hundreds of variations, and you can change its features at any time. You can speed up the action, change the size of the characters and even make them more vicious — it's all up to you; and you can see it all on-screen immediately.

GAMES DESIGNER — H.U.R.G. enables you to design and store the games you create on cassette and play them later using H.U.R.G. as the control program. It's the one program you will never tire of.

Now you can create all the stunning arcade effects on your 48K Spectrum that up until now have only been available to professional software houses.

Open Forum

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed. We will pay the *Program of the Week* double our new fee of £6 for each program published.

VOL Sound volume
SHIP Character of ship
FUEL Fuel units
X Position of ship on screen
AS Command
DELAY Delay loop

Space Sweeper

on Vic 20

In this game for the unexpanded machine you are in control of a mine sweeper. Your task is to clear sectors of space of mines. They are highly dangerous so don't run into one. For each mine destroyed you get 10 points and four extra fuel units. There are five controls using the keyboard.

A Rotate right
D Rotate left

S Accelerate
H Hyperspace
Spacebar fires torpedo

The computer displays your acceleration, the amount of fuel units remaining and your score. Watch your fuel level, and don't use too much acceleration.

To make the game more difficult or easy, change the amount of fuel units given in line 295.

Variables
SC Score

Program notes

9-10 Jump to character creating routine
10-30 Set up variables and clear screen
30-31 Sound effects for Hyperspace
31-32 Prints mines randomly on screen
35-81 Gets command and acts accordingly
90-91 Acceleration routine
95-190 Moves ship
200-286 Firing torpedo routine, moves torpedo and checks to see if it has hit a mine
290-300 Explosion routine
400-455 Ending routine
500-660 Sets up user defined graphics

NEW RELEASES FOR THE DRAGON 32/64
FROM SALAMANDER SOFTWARE

TURTLE GRAPHICS

This program has been designed to provide a method of drawing pictures with your computer which is both fun and educational, and yet simple enough to be enjoyed by the young or inexperienced computer user and the enthusiast alike.

Pictures are drawn by telling the computer to move forward and turn so that it traces a picture on the screen or a colour printer.

Powerful repeat and word library facilities allow you to build up new commands as you progress, and you can save your word library on cassette tape or floppy disc.

The end result of using a system such as this is an increased knowledge of geometry, and a basic understanding of simple programming, making the program an ideal educational tool for all ages.

• Snappy 32 page manual included.

• Runs from cassette or disc (using either Dragon Data DOS or Premier Microsystems DOS).

• Simple command structure.

• Repeat command sequences can be nested to 32 levels.

• "Word" definition can be nested to 32 levels.

• Powerful word library handling.

• Save and load library using cassette or disc.

• Dynamic editing of command string and word library.

• Scaling and stretching commands.

• Will draw pictures on a colour printer/plotter.

• TRS-80 GCR115, MCP-40, or compatible.

• Price: £9.95.

DATA RETRIEVAL SYSTEM

DRS is a powerful database package for the Dragon computer, supporting files stored either on cassette or disc (using the Dragon Data DOS).

DRS has been designed for ease of use and flexibility. You can design your own database, specifying number and type of fields. Powerful full screen editing allows easy design of your own screen.

It contains full facilities for adding, maintaining and deleting records. Fields may be added to, deleted from or existing files even after records have been added. Search facilities allow selection of records by any portion or combination of fields.

DRS also has an extremely flexible report generator, allowing anything from printing of labels to paginated reports.

• 22 000 characters of data per file.

• 54 000 characters of data per disc file.

• Each record may contain a maximum of:

• 180 characters, 20 alphanumeric fields

• and 10 numeric fields.

• Inclusive, exclusive and ranged searches for alphanumeric fields.

• Comparative searches for numeric fields.

• Add, delete and change records.

• User definable screen displays.

• User definable report generator.

• Record format may be changed at any time.

• Disc files require a Dragon Data DOS.

Price: £14.95

Space Sweeper
by Steven Green

Colour Codes on Spectrum

This program helps you to work out the colour codes for resistors — it can be very helpful for building electronic projects.

Although the basic program is very simple, I have used user defined graphics to make it visually appealing.

RESISTOR By D.BURNS

Hold RESISTOR with tolerance band to the left-hand side and read colours from left to right. Type the colours one at a time into your spectrum and it will print out the values in the blue box.

TITANIC

N.A.S.A. SOURCES REVEAL POSSIBLE LOCATION OF "TITANIC"

At a Press Conference today a N.A.S.A. spokesman confirmed that recent photographs taken by their Intel-Sat G Marine Resources Satellite show a

number of large sub-marine objects, one of which is thought to be the wreck of the TITANIC which sank 72 years ago next month.

ZX SPECTRUM ACCESSORIES

SPEEDYLOAD. Have your waiting list! This short program lets you save/load at 3000 baud on a normal cassette recorder. Easy to use. Cassette (48K) £3.55

NMS TAPE CONTROL. The unique unit plugs into the cassette ports allowing the expansion port free and is easy to use. It provides fully automatic on/off and load/save head switching of one of one of two cassette recorders from keyboard or from within program using simple BEEP commands. Built-in beep amplifier with volume control. SAVE, LOAD indicators, semi-auto switch for rewind, verify, etc. Smart black case. Instruction booklet £23.45 (P&P £1.50)

NMS TAPE SWITCH. Recorder on/off and load/save switching without head changing. Beep amplifier with volume control. Black case. £11.50 (P&P £1)

NMS BEEP AMPLIFIER. Sound booster. Volume control. Black case. £8.95 (P&P 80p)

NMS RELAY CONTROLLER. 4-channel, each with 4 amp double pole relay. Relay has ON indicator. It plugs into the Spectrum MK2 socket and is easy to use. Each relay is BEEP activated, and incense terminals. Cased. £27.95 (P&P £1.75)

AERIAL SWITCH. Saves unsquiggling the TV aerial with lead to TV. £2.65

TAPE HEAD CARE. Cleaning/magnetising cassette. £1.85, head-alignment test cassette with instructions. £2.85, head cleaning cassette. 80p.

CASSETTE RECORDER. Main/battery. Spelling/comparator. £18.95 (P&P £1.75)

LEADS. Main extension, 12ft, five socket. £1.10, 6ft video/telex extender. £1.25

REPLACEMENT VIDEO LEAD. £1.45, 4ft cassette leads, two. £1.25

BLANK CASSETTES. Pack of 5, with cases. C12-£1.98, C60-£1.45, (P&P 80p)

CASSETTE LABELS. Blank white, self-adhesive, 50 for £1.10, 100 for £1.95

Add 40p min P&P, or as shown. All goods guaranteed. Send SAE for details

MESS MICRO SYSTEMS, 100 Drake Avenue, Inverness IV2 3SD

NEW!

48K SPECTRUM FRED

Author: **Indescomp**

Action beneath the Pyramids!

Fearless Fred the intrepid Archaeologist searches the creepy catacombs below the torrid tomb of 'Tootiecarmoon' for the terrible treasures amidst monstrous mummies, ghostly ghosts, bats and rats!

COMMODORE 64
BOOGABOO (THE FLEA)Author: **Indescomp**

Itchy action!

Jump your way out of the caves with Bugaboo the flea but beware of the fearsome Dragon as you jump around the exotic vegetation.

48K SPECTRUM
RAYMOND BRIGGS' THE SNOWMANAuthor: **David Shea**

An enchanting game based around episodes of Raymond Briggs' amazingly successful book.

All games marketed exclusively by Quicksilver Limited. Please send me the games I have ticked.

Sounds

on Commodore 64

This program is written to help you gain

user control in real time in the SID sound synthesizer chip.

The listing is well supplied with *Rems* which can be left out if desired. There is provision for altering all the parameters of the three 64 voices (plus white noise) and

even games paddle control of the various voice treatments is possible. The program utilises the Filter, Ring-Modulator, Waveform control, Pulse width control, etc. With care some very professional sounding effects can be achieved.

I. G. PROGRAMS
Announces the first in their exciting series of double A side games packs for the Commodore 64. The first of this series being

BOXING AND GALACTICA I

BOXING

Pure excitement for two players spread over ten rounds of fast and furious action, graphically superb with exciting sound — 100% mc. Requires joystick. A must for every budding champ.

GALACTICA 1

With a price on your head for a crime you did not commit you seek sanctuary in a far off galaxy called Galactica 1, only to be tracked down by ruthless alien bounty hunters. 100% mc. A fight to the bitter end. Requires joystick. Incredible graphics and sound.

INTRODUCTORY OFFER OF

£7.50

For limited period only

Also out now for the 48K Spectrum

CYPHER

A great version of this best selling game featuring excellent graphics and sound. The idea of the game being to crack a code made up from coloured pegs by the computer. You can choose how many colours are used in code, how many guesses you want and whether or not you wish to be timed.

The ultimate brain strain! All for

£5.00

PONTOON

The superb version of a great card game featuring excellent graphics and sound will keep you in front of the TV for hours of fun. At the start of each game you will be asked £100 with which to bet. If you lose all your money then you lose the match. Can you win the ultimate gamble?

INCREDIBLE VALUE AT

£3.50

Please state which games you require and quantity add 50p P&P, access cheque or PO to

I. G. PROGRAMS

Require original quality games programs for the Commodore 64 and 16/48K Spectrum. High Royalties + initial payment.

Microradio

GW6JJN

Bearcat scanner radio

An interesting item of news has reached Microradio this week concerning a new product made by a company called Electra based in the United States. If you're feeling rich, their phone number is area code 317-894-1440; and you need to be fairly wealthy to buy their Bearcat Compuscan Scanner Radio.

Many amateurs are already familiar with the Bearcat range of scanners, which operate mostly on the VHF and UHF

bands where all the interesting things happen. Here are the aircraft bands, the marine and shipping frequencies, the taxis and road services — even, your friendly local gas and electricity board, or television repair man, to name but a few. More importantly, there are two amateur bands, television signals and downlink transmissions signals of all sorts. There are simply so many frequencies involved and so much going on that I have often thought a computer was needed to sort it all out.

Electra had the same idea and came up with the Compuscan. This is designed to interface with the Commodore 64 computer and comes complete with a program on disc, a mains adapter, an indoor aerial, various connecting cables and the Bearcat Compuscan itself. Basically it is a black box

(white, in fact) that you connect into the computer and into which you plug an aerial. The dial doesn't exist anymore and the means to scan the bands or choose a particular frequency is all done via the computer keyboard and the monitor. Not only will the computer find the stations you select, but it will remember all those stations it found while scanning around. Interesting thought that — Big Brother is listening.

On the whole, I think I prefer to twiddle the knobs myself and write the stations I hear down in the logbook. After all, some things are still better done with a paper and pencil. If you disagree, the Bearcat Compuscan Scanner Radio can be yours for a mere \$500. You pay your money and you take your choice.

Must mention here two recent publications reaching Mic-

roradio. The first is the excellent SARUG (Sinclair Amateur Radio Users Group) Newsletter which contains many good program listings and information for Sinclair users interested in radio. For those of you who are not Sinclair Users there is the RAMTOP newsletter fresh off the presses with goodies for all radio-computing enthusiasts. SARUG can be reached by SAE to 4 Red House Lane, Leiston, Suffolk IP16 4JZ. Likewise RAMTOP, SAE to Great Billing Rectory, Northampton NN3 4ED.

Ray Berry GW6JJN

This series of articles is designed for radio and computer enthusiasts alike. If you have any queries that you want answered, look and type in ahead of topics that you would like to see covered, write to Ray Berry, Mic Radio, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 2LD.

DETAILS

Level 9 Computing specialise in high pure fast puzzle adventures with detailed scenery and a wealth of puzzles. All games have over 2000 locations and a wide game lifetime and cost £9.99 only.

MIDDLE EARTH ADVENTURES

1. **COLOSSAL ADVENTURE** A complete full size version of the classic mainline game. Adventure with 70 bonus locations added.

2. ADVENTURE QUEST

Centuries have passed since the time of Colossal Adventure and evil armies roam The Land. With cunning, you must overcome the many obstacles on the road to the Black Tower, source of their demonic power, and destroy it.

3. DUNGEON ADVENTURE

The trilogy is completed by this massive adventure. Set in the rich caves below the shattered Black Tower. A sense of humour is essential!

THE FIRST SILICON DREAM ADVENTURE

4. **SNOWBALL** The first of Peter Austin's second trilogy. The giant colony slithering Snowball 9 has been subjugated and is heading for the sun in this giant game with 7000 locations.

THE LORDS OF TIME SAGA

7. **LORDS OF TIME** Our congratulations to Sue Gazzard for her superb design of this new time travel adventure through the ages of world history. Chill to the Ice-age, go romm! with Cavewars, legends, shed light on the Dark Ages etc etc.

LEVEL 9 ADVENTURES

**BBC 32K COMMODORE 64 SPECTRUM 48K
LYNX 48K NASCOM 32K ORIC 48K ATARI 32K**

Level 9 adventures are available at £9.99 from good computer shops, or mail order from us at no extra charge. Send order, or SAE for catalogue, to the address below - and please describe your micro.

LEVEL 9 COMPUTING

Dept 229 Hughenden Road, High Wycombe, Bucks HP13 5PG

REVIEWS

Adventures which have a fast response time, are spectacular in the amount of detail and number of locations, and are available to cassette owners. Simply smashing! *Soft, Sept 83*

"Colossal Adventure is included in Practical Computing's top ten games checklist for 1983. Poetic and imaginative!" *PC, Dec 83*

To sum up: Adventure Quest is a wonderful program, fast, exciting and challenging. If you like adventures, this is the one in for you. *His LG issue 1, 7*

"Dungeon Adventure is recommended. With more than 2000 locations, 700 messages and 100 objects it will tease and delight!"

- Educational Computing, Nov 83

"Snowball. As in all Level 9's adventures, the real pleasure comes not from scoring points but in exploring the world in which the game is set and learning about its denizens. This program goes to prove that the mental pictures conjured up by a good fantasy adventure can be far more vivid than the graphics available on home computers."

- Which Micro?, Feb 84

"Lords of Time. This program, written by newcomer Sue Gazzard, joins my favourite series and is an extremely good addition to Level 9's consistently good catalogue. As we have come to expect from Level 9, the program is executed with wonderful style - none of those boring 'You can't do that' messages! Highly recommended" *PCW, 1st Feb 84*

Tony Bridge's Adventure Corner

Worth the price?

Software can be very expensive nowadays! *The Hobbit* was the first of the British programs to charge £15, but in this case the buyer was getting:

- a) one of the best adventures available
- b) a well-produced manual
- c) a copy of the book to boot (or read, as you wish!)

No one can complain about that for value, but what about *Trader*, that was mentioned by Mr Valentine last week? This is called, in the adverts "a graphic adventure". It isn't really, being rather a series of brain-twisters, separated by slowly-drawn graphics which rely heavily on arcs and circles. Although the packaging was, for its time (late 1982, being written by Pixel for the ZX81, selling for £7, and only later being updated for the Spectrum and Vic 20) rather nice, it was never worth the asking price. In fact, it had an attention-span of about 5 minutes!

Anlog seem to come out quite well in Mr Valentine's mini-review (see last week's page). I haven't seen any of their programs (hint hint), but *The Dungeons*, in particular, seems worthwhile investigating.

Crush, Crumble & Chomp would not, I must admit, figure on my list of good adventure programs. It is, to be sure, a very good game that I enjoy playing (although, as Mr V pointed out, it is rather pricey — but this is true of most American imports) — and although I am certainly in favour of allowing many arcade games to receive the honorary title of adventure, *C,C & C* is not one of them! It is, however, a good strategy game, and one in which you, for once, are the alien!

The Valley has always been a D & D favourite of mine. The scenario concerns the adventures of the player, in this case taking on the role of Alarian, a young wizard, as he battles against the evil Vounim. There are a number of spells to be used, and a lot of monster-bashing and gold-collecting.

The responses are ultra-fast, though not very subtle: in fact they consist of not much more than 'stab or slash?', the answer to

which you have to give in about two seconds, before being blattered by whatever monster it is that you're fighting! Great stuff! And I would have given the program rather more than 4 out of 10.

I was surprised to hear of *Alarian's Revenge* though — I remember that ASP had some trouble a few months ago with copies of their game on the market (the company who perpetrated that have since disappeared).

The Orb (which I remember from the early days of the Spectrum) and *The Kingdom* are oriented too much toward luck, as Mr Valentine says. I still think that adventures should be solved through skill and cunning rather than sheer good fortune (bad fortune, too, can play a large part, which is not so good when you've made a series of calculated moves).

Mr Valentine ends his letter with a plea for help — "How do I get past the bear in *Adventureland* without losing the royal jelly? And how do I get across the lava?" Well, bears are notorious, in adventures, as in real life, for being pretty hungry! This, of course, necessitates losing the Royal Jelly — so you could try surprising him in some way. As for the lava... well, upon reflection (hint! hint!) I would try to get rid of the heat in some way!

That should also help Richard Briggs, of Thornford, in Dorset, who is also playing *Adventureland* at the moment.

Leaving Scott Adams for now, let's turn to Winterson's *Ring of Darkness*. Some months ago, I asked my colleague, John Scrivener, to review this program for Adventure Corner — I have not seen the game yet, although there is now a version for several of the most popular micros, and it has been well received. Neil Scrimgeour writes from Corby: "I have been stuck for about two months in *Ring Of Darkness*. The problem is that I have completed dragon's sign quest, been down labyrinth of doom

and become a level 2 dwarf, but I cannot seem to get any more money. I can't complete other quests because I can't buy enough hit points or food with only 150 gold pieces. Is there any other way I can gain money easily, apart from killing bandits etc? With regard to another adventure, *Franklin's Tomb*, it may be helpful to have a bath plug when entering the aquarium."

Thanks for that tip, Neil, I've been stuck there myself for weeks. In the meantime, can anyone help with those *Ring of Darkness* problems?

This week, just two names in *The Hobbit Hall of Fame*: the first is particularly noteworthy, as J L Davies is the first person (to let me know, anyway!) who has completed *The Hobbit* on the Oric. He gained a creditable score of 77.5 per cent. "Experience," says J L, "has taught me that there are plenty of locations yet to be explored. If any Oric owners are being driven to distraction by any particular part of the adventure, I would be only too glad to assist."

The other name for the *HHOF* this week is Ian Ferguson on his Spectrum. Ian asks for help in a couple of adventures, the first being the excellent *Inca Curse*, from Arkic, of course. "How do I put out the fire? Also, in *Ship of Doom*, how do I get the key from beneath the glass?"

First, the fire. Using our little code (starting at the second letter, read off every other letter — when you get to the end, return to the first letter and repeat the process:

TSHMBOLT/ANNE/KREW/TI

and to get the key:

IPCDIRIN/TYS/EDRN

Ian carries on: "Now a suggestion — please review *Gateway to the Skies* by Solarsoft. I can assure you that you will not regret it. Howard Goodman, the author, has excelled himself with this fabulous game. True it was featured on the New Releases page, but this did not give the public a fair insight into the wonderful game."

I have not seen this Adventure, Ian, but Wizard Taylor's page each week would give you at least a vague idea of what to expect, an out-and-out arcade shoot-'em-up, or a relaxed mind puzzle. Having said that, Ian, why not write a review for me — the game obviously means a lot to you! Why not let everyone in on your discovery?

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further write to Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD

"Run more than ten tasks on a ZX81-FORTH ROM?"

Sure! More than 10 tasks simultaneously and, in some cases, up to 300 times faster! That's what replacing the basic ROM with the new FORTH does for the ZX81 - and more!

The brains behind the breakthrough belong to David Husband, and he's building Skywave Software on the strength of it. Already orders are flooding in and it's easy to see why.

The ZX81-FORTH ROM gives you a totally new system in addition to multi-tasking and split screen window capability, you can also edit a program while three or four others are executing, schedule tasks to run from 50 times a second to once a year, and with a further modification switch between FORTH and BASIC whenever you like.

The ZX81-FORTH ROM gives you a normal keyboard with a 64 character buffer and repeat, it supports the 16k, 32k, 64k RAM packs, it is fig-FORTH compatible and it supports the ZX printer.

The price, too, is almost unbelievable. As a "fit it yourself" complete with manual, it's just £25+VAT. Add £2 p&p UK (£5 Europe, £10 outside Europe) and send your order to the address below.

HISOFT PASCAL DEVPAC

Quality ZX SPECTRUM Software HISOFT PASCAL 4T

"... I haven't seen any other compiler that could match Hisoft's Pascal" ... Using the Spectrum Micro - Autumn 1983
"This is a very impressive product... of benefit to any Spectrum programmer" ... David Bolton ZX COMPUTING Aug/Sep 1983

Just two comments from full length reviews of our powerful and virtually full implementation of Standard Pascal. The advantages of using Pascal are well-known - fast, self-documenting, and above all, structured programs and now, with Hisoft Pascal, you can reap all these benefits on a wide range of home computers, including the 48K Sinclair Spectrum! Hisoft Pascal produces programs that run typically 40 times faster than equivalent ZX BASIC programs and, sometimes, up to 1,000 times faster!

Hisoft Pascal supports FOR... DO, WHILE... DO, REPEAT... UNTIL, CASE... OF, INTEGERs, REALs, CHARACTERS, RECORDs, POINTERs, SETs, ARRAYs etc. etc. - it is not a Tiny Pascal but a virtually full implementation of the language allowing the user to develop true high-level language skills while attaining a execution speed close to that of machine code. Complete with 170-page manual.

HISOFT DEVPAC 3

DEVPAC is most highly recommended. The documentation is first class." Your Computer May 1983

"... if you write programs in machine code, buy DEVPAC - it is the best currently on the market." Adam Denning, ZX SOFT in Which Micro September 1983

Two comments from reviews of earlier versions of DEVPAC - now we have DEVPAC 3 available: a powerful Z80 assembler with conditional assembly, assembly from tape (to enable generation of very large code files), ORG, EQU, DEF, DEFS, DEFW, DEFM, labels of any length - in fact all you need for fast (3,000 lines per minute) and powerful assembly programming. But it doesn't stop there. DEVPAC 3 also includes an incredible debugger dis-assembler giving you a front panel display of the Z80 system and allowing extensive debugging of your machine-code program, including single-stepping programs EVEN IN ROM! Open up the secrets of low-level programming with DEVPAC 3

Prices:
Hisoft Pascal 4T (ZX SPECTRUM) £25 inclusive
(NewBrain, SHARP M2700 etc) £35 plus VAT
Hisoft DEVPAC 3 (ZX SPECTRUM) £14 inclusive
(NewBrain) £25 inclusive

MICRO DRIVIN

A NEW CONCEPT IN ADVENTURE GAMING
FOR THE 48K SPECTRUM

Featuring

'INSTAGRAFIKS'

Instant full colour resolution graphics. No longer do you have to wait while the graphics are drawn and coloured on the screen. Instantaneous graphics plus a Treasure Hunt of seven (yes seven) 'Adventures' within 'Adventure' make this a challenge supreme! Only the best drivers need apply!

£6.95 inc.

One of the best graphic adventures I have seen... the graphics are superb... the interior of the car is as good as any of the graphics on 'Chequered Flag'. (PCW 22nd February, 1984)

Also available.

SOLARIS

A superb Graphic Adventure occupying a massive 96K!

Can you successfully lead the Solarian Rebellion thereby gaining ultimate freedom?

Beautiful hi-res colour graphic pictures.

£8.95 inc.

Coming Soon

SE - KAA of ASSIAH

The ultimate 'Instagrafik' Fantasy Adventure crammed into 96K of program power!

This amazing adventure will feature 'Instagrafiks' plus a host of new and exciting features. This one will test you to the full!

Available at good computer shops or by mail from
SOFTTEL

5 Durward Drive, Glenrothes
Fife KY6 2LB, Scotland.

Peek & Poke

BUSINESS AID

Tommy Udall of Hadley Road, Cockfosters, writes:

Q I have a Commodore 64. I am quite happy with it, though I am finding a few problems creating sprites.

I would like to know if the 64 can handle CP/M. I want to be able to use my computer to help my father who has his own business. I have been told that CP/M needs another (Z80) Cpu. Is this true? If so, can it be attached to the Commodore?

A You are correct in that CP/M can only be run on a Z80 Cpu. Commodore have had a Z80 card planned for a long time, but it has had 'production problems'. It should be available in the form of a plug-in cartridge, but the timing is still uncertain.

Please note that you will need to have a disc drive attached. If you do not have Commodore's own drive, then you will need an additional interface as well as the disc drive.

KEYBOARD CHANGE

Graham Todd of Deerswood Road, West Green, Crawley, West Surrey, writes:

Q Having recently bought a Dk'Tronics keyboard for my Spectrum I now find myself with a perfectly serviceable but unnecessary Spectrum keyboard. Could you advise me whether or not I could use this with my ZX81? If so, could you tell me if any hard/software alterations are needed?

It seems silly to waste my old

keyboard, but so far neither Sinclair nor Dk'Tronics have replied to my enquiry.

A Both the keyboards are identical, in that they use the same grid of 8x5 (8 address lines and 5 data lines). The data lines are mapped into the same numbers D0 to D5.

There should be no problems if you are careful. If any problems do develop, it is most likely that the address lines will have been misrouted and you might have to change one or two of these around. It goes without saying that this will void your guarantee.

SKI SCROLLS

Dorian Bloch of Park Hill Road, East Croydon, Surrey writes:

Q I have a BBC model B and a commercial game which scrolls to the right. However I would like to make it scroll downwards. I was thinking of putting in a few lines, before Loading to turn the screen 90° clockwise, is this possible? (The game is *Ski Slalom* by RH Electronics.)

A In all honesty I do not know why you want to change the screen display. Scrolling up or down, usually by just printing off the top line of the screen, invariably produces inferior results, when compared to the well written Machine Code side scroll you have in *Ski Slalom*.

More importantly, it is, to say the very least, difficult to do. A routine to rotate the screen display, wouldn't be sufficient, as the main fabric of the program would have to be changed. To move a single pixel point one place to the right, you increment by one. Simple, but to move it up or down you need to increment by the difference in screen lines which, in turn, depends on mode.

Just to make things difficult, besides the actual programming task involved, there is the added problem that *Ski Slalom* is one of the few non Acorn programs that uses the locking facility within the new 1.2 OS. When some of the details of this system were broken and

published, Acornsoft prosecuted. The case never went to court; the publisher involved settled out of court. Do you know how to break into the Lock?

WIPE OUT

Miss K D Yardwood of Meadowcroft, Hatfield, Herts, writes:

Q Please could you help me and perhaps give a warning to other computer owners. I have a remote control TV and a Spectrum 48K. When I went to use it the other day I could not get it to work, not even the (c) 1982 notice. Is it possible that the infra-red remote control has wiped out the ROM? If not what could it be?

A I would be very surprised indeed if your remote control was to blame, as far as wiping out your roms. Certainly infra-red can be used for this, but this involves Eptoms which have the actual silicon wafer within the chip, exposed to the radiation for some hours. I presume that you did not dismantle your Spectrum.

To be honest I think the problem lies elsewhere. Assuming you have tried the obvious items such as the leads, and the fuse in the plug, have you tried re-tuning your television? It is well known that most home computers, not least the Spectrum, are liable to wander off station. Have you tried using your computer on a friend's television?

JOB PROSPECTS

Heather Manley of Mairdiffe Court Hospital, Abergavenny, writes:

Q Would you give me some advice? I want to buy a

computer in order to learn Basic and improve my job prospects. I was thinking of the Vic starter pack.

A I am not certain that the Vic is necessarily the best for your purposes, despite its many advantages — the Basic is not of the best and with its use of control codes etc, wouldn't be much like the kind of Basic you would meet in a job.

You need a computer with a fairly standard Basic that can also run other languages, few jobs require Basic many need Fortran and Cobol. My suggestion (in the same price range) would be either the Spectrum 48K (the Basic is slightly odd but you have quite a large range of other languages you can run on it) or the Electron (excellent BBC Basic although not many other languages as yet). One other alternative might be to get a ZX81 starter pack which is a cheap and reasonable introduction to the subject.

MAKING MUSIC

Francis De Forne of Hayes, Kent, writes:

Q I have heard of a program where a joystick can be used on a Commodore 64 to play music. Is this true? I have a CBM 64 which I was given for a Christmas/Birthday present, and I have a joystick as well. If there is such a game could you tell me where I can get it?

A By the time you see this, it should be available in your local computer shop. The program you are thinking of is 'Dancing Feet' and it is an unusual and impressive program from Artic. The price is £6.95, and it allows a great many rhythm variations to be set against a melody line. The real advantage is the program will not let you get out of tune.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek* it to Ian Beardsmore and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke*, PCW, 12-13 Little Newport Street, London WC2R 3LD.

SOFTWARE FOR SPECTRUM AND ZX81

OUR POLICY

We aim to create programs which you will keep on using until your computer wears out. You won't find our programs in the top ten and you will look in vain for colour adverts and fancy packaging. Nevertheless we have built up a solid following of discerning users in all parts of the world. Read the reviews of our programs if you can find them. We have been consistently praised for quality, originality and value for money.

WHAT DO YOU GET?

The bulk of our cassettes are now made by the factory which produced the Horizons tape. Programs are recorded twice and carry on the reverse side an audio narrative to supplement the operating instructions. Where appropriate cassettes are accompanied by a comprehensive and clearly written instruction manual.

48K SPECTRUM

"Day of the Match" £5.00
Fascinating and realistic simulation of an entire football season. Name your own teams if you wish (English league provided on cassette). Rate each team from one to nine in various success categories such as attack, defence, manager etc. Watch the season unfold. Includes knock-out cup option.

"Ball by Ball" £5.00
Simulates a test match series or one day international series. Set up your own teams and pool of players (England v Australia provided). Rate each player's capabilities as batsman and bowler on a one to nine scale for qualities such as talent, effort etc. Pick your teams and play the match. Electronic scoreboard shows progress of a match. Full supporting score card and series averages.

"Superplan Generator" £12.00
Spreadsheet type program with variable column width and variable number of columns. Lets you sacrifice columns you don't need to get more lines.

"Superplan Pack 1": Business Applications £7.00
Ready-made applications programs for sales day book, purchase day book, cash book and petty cash book.

"Superplan Pack 2": Home Computing £7.00
Ready-made applications programs for home budgeting, nutrition tables, car running costs and bank statements.

"Superview" £5.00
Simple but effective information display. Up to 42 pages of text and low-res graphics. Access pages on demand or run in perpetual slide-show mode. Full facilities to create your own pages and build up an information library on cassette.

16K SPECTRUM

"Superdraw" £5.00
Create full colour high-res pictures and store them on cassette for use as titles or background screens in other programs. Or just have fun doodling and build up a cassette library of your creations. Slide show option allows you to review pictures stored on cassette.

16K ZX81

Here is a selection of titles still available for ZX81. Send for illustrated catalogue. These are the ZX81 equivalents of the Spectrum programs described above. Although similar in concept the specifications fall short of the descriptions given for the Spectrum.

"FOOTBALL-LEAGUE" Forerunner of "Day of the Match" £4.00
"TEST-MATCH" Forerunner of "Ball by Ball" £4.00
"VIDEO-PLAN" Forerunner of "Superplan" £7.00
"VIDEO-AD" Forerunner of "Superview" £7.00
"VIDEO-SKETCH" Forerunner of "Superdraw" £7.00

Many independent computer shops now stock our products but we continue to supply by mail order on an off-the-shelf immediate delivery basis. Prices include VAT, post and packing in UK. Add a £1 for postage if you live in Outer Mongolia. Note: "Day of the Match" not available until late October 1983.

Build a robot...

DIY Robotics and Sensors
with the BBC computer

by John Billingsley

How do you interface a home-made joystick, a stepper motor or a fully fledged robot to your BBC computer? How do you write the software for stepper motor control and how can you use the software and a few pennyworth of components to get an analogue output? How can you build a cheap eye for robot vision?

Step by step instructions guide you in constructing a wealth of gadgetry. At the same time you will build an understanding of the principles of digital and analogue input and output.

Although he spent eight years as a Cambridge don John Billingsley has a practical approach to engineering. His commercial designs range from auto-pilots and hospital computer systems to single-chip cooler timers and a rising damp meter.

He is a member of several IEE committees, leads a team researching into robotics and is well known as the organizer of the Euromouse Maze contest.

Look out for the Sunshine range in W.H. Smith's, Boots, John Menzies, other leading retail chains and all good bookshops. Dealer enquiries: 01-437 4343

Please send me ☐ DIY Robotics with the BBC Computer at £6.95 each, I enclose cheque/postal order for £ made payable to Sunshine Books, 12-13 Little Newport Street, London WC2R 3LD. Or phone your order through on Access Mastercard 01-437-4343

Artificial intelligence on the Commodore 64

by Keith and Steven Brain

Artificial intelligence on the Commodore 64 shows you how to implement AI routines on your home micro and turn it into an intelligent machine which can hold a conversation with you, give you rational advice, learn from you (and teach you) and even write programs for you.

The book explains AI from first principles and assumes no previous knowledge of the subject. All the important aspects of AI are covered and are fully illustrated with example programs.

For many years science fiction books and films have contained 'intelligent' computers which appear to be at least the equal of man. Although some of the features described in these remain illusions, extensive research into AI has brought many of the ideas much nearer reality.

Look out for the Sunshine range in W. H. Smith's, Boots, John Menzies, other leading retail chains and all good bookshops. Dealer enquiries: 01-437 4343

Please send me ☐ Intelligence on the Commodore 64 at £6.95 each. (enclose cheque/postal order for £____ made payable to Sunshine Books, 12-13 Little Newport Street, London WC2R 3LD. Or phone your order through on Access Mastercard 01-437 4343

Write your own machine code adventures

Without any knowledge of machine code whatsoever

STOP PRESS!
Available soon for
the Commodore 64

THE QUILL

THE QUILL is a major new utility written in machine code which allows even the novice programmer to produce high-speed machine code adventures of superior quality to many available at the moment without any knowledge of machine code whatsoever.

Using a menu selection system you may create well over 200 locations, describe them and connect routes between them. You may then fill them with objects and problems of your choice. Having tested your adventure you may alter and experiment with any section with the greatest of ease. A part formed adventure may be saved to tape for later completion. When you have done so **THE QUILL** will allow you to produce a copy of your adventure which will run independently of the main **QUILL** editor, so that you may give copies away to your friends.

THE QUILL is provided with a detailed tutorial manual which covers every aspect of its use in writing adventures.

FOR THE 48K SPECTRUM AT £14.95

Now available in larger branches of W. H. Smith, Boots, John Menzies and from many computer shops nationwide, or direct from us by post or telephone.

PYTHONESQUE

The Quest for the Holy Grail is a graphics adventure from Dream Software, based loosely on the Monty Python film of the same name.

In terms of the quality of the graphics, *Holy Grail* is roughly *Knight's Quest* quality. A quick play suggests the puzzles are going to be nearly as difficult to solve. The big difference is that the adventure is populated by CND supporters, nuclear powered lamps and other anachronisms.

The game is neatly packaged in a box with a moderately funny booklet explaining the plot for £5.95. I have a feeling you'll be hearing a lot more about this one from Tony Bridge in the coming months.

DIAMONDS

Suddenly, everybody is discovering that not only can you have sprite graphics on the Spectrum, you can also have them on the Vic20.

Bongo, which requires an extra 16K, features a mouse who must overcome all sorts of obstacles to marry a Princess. The way to win her is to collect her lost diamonds -- surely no basis for a sound relationship?

Anyway, getting the diamonds involves the usual running and jumping over all kinds of ladders and holes etc, and as you would expect from sprites, the graphics are large and smooth moving. There are six different screens for *Bongo* (the mouse) to negotiate and three different skill levels.

DIVING DEEP

Just when you thought it was safe to go back into the water, CRL have brought out *Glug Glug*. You are a deep sea diver salvaging treasure from the ocean floor, and avoiding, at all costs, any marine life on the screen -- they're all hostile. Luckily your dive is equipped with a ray gun and an unlimited supply of ammunition.

The game is enjoyable both for its simplicity and originality. Played on progressively more difficult levels, it can seem very easy at first, but rapidly becomes tricky as a wider variety of fish wiggle back and forth. Look out for the sharks at Level 6 -- they're not only after you, but will also cut through your line.

The graphics on *Glug Glug* are particularly pleasing, as each fish is clearly distinguishable and recognisable. However the 'sound effects' advertised on the cover are only really as good as you can expect from the Spectrum.

Program *Glug Glug*

DESIGNER

In the same way that there is no need for computer knowledge

to write decent text adventures with the *Quill*, so *Dungeon Builder* intends to provide the same facility for graphic adventures.

Obviously, such an elaborate system is going to demand an extensive review but, sticking my neck out, I think the program is going to prove superb, and should have quite a number of the lesser Spectrum adventure houses worried.

The program divides neatly into the two parts, text logic and pictures. The latter are produced by a straightforward designer option which lets you draw with the keyboard and fill in shapes with different colour -- with care you can get good results.

The text logic part of the program is less easily summarised. Basically, it operates in a similar way to *The Quill* -- you describe objects, locations and the logic that links them using a number of memories. Like *Quill* it's essentially easy to use, except that you must think about the logical implications

of what you wish to do very carefully before you begin.

TURMOIL

If you are one of those masochists who like adventure games that are very difficult indeed, then *Klartz & the Dark Forces* could be for you.

The world (as is usually the case in adventure games) is in turmoil -- overrun by Klartz and his forces (they're the ones who are dark). Does anyone else out there share my doubt about Klartz as a name to conjure up fear and trembling -- surely, he sounds a bit weedy?

Like *Time Lords*, the game is set in several time zones and in each there are particular

Pick of the week

RAID THE LARDER

Caesar the Cat was a marvelously endearing program for the Commodore 64. Now it is available for the Spectrum.

The idea of the game is to move a cat -- Caesar -- around a larder grabbing the army of mice who are nibbling away at all the goodies to be found there.

Caesar works on a strict time limit -- he must keep catching mice to keep his job. Aside from the way the mice dart about, there are several large jars stored in the larder which Caesar must try not to break.

One of the several features that gave the Commodore 64 version of the game its appeal was the sheer beauty of the graphics -- large, colourful and realistic (in a cartoon sort of way). The Spectrum version cannot quite match the original, simply because of the hardware's limitations, but nevertheless the graphics are still

large and realistic, matching anything seen from Ultimate Marvelous.

objects corrupted by Klartz which must be redeemed and brought back to the light.

This involves retrieving them from their zones and placing them together in a suitable place for them to receive the Power of Light. Presumably God, or even Wagner, descends and blesses them or something.

However, facetiousness apart, this is the best adventure I've ever seen for the Dragon — it's complex and entirely machine code. Expect to be up all night.

IN TRAIN

Midnight Express is a train orientated program for the Commodore 64. In fact, train obsessed might be a better way of putting it.

The plot is very complicated and is divided into three sections. In the first, you are a man who turns into a carriage and tries to join onto a train circling a track. In the next, you try and reduce the number of carriages to prevent the train from bumping into itself — mud railmen are constantly adding carriages to the track. Finally, you have to rescue various parcels that are strewn on the track from the mad rush of an oncoming train.

The game is mostly in machine code and consequently the action is fast and furious. An original concept too.

RUSTIC

Bubble Bus has done some good software in the past for the Commodore 64. Its latest title is *Flying Feathers* and is rustic in theme.

You are a game keeper whose regrettable task is to sit in a freezing boat in the middle of a lake preventing various eagles from grabbing fish. This involves shooting at them.

Other than that there isn't much to say; the graphics are excellent as is the sound track. Apparently the game utilises 10 sprites rather than the supposed maximum of 8. Bubble Bus's new games are priced at £6.99 which is a couple of pounds lower than the norm — let's hope it's the beginning of a trend.

CRASH DIVE

Yet more ZX81 programs! *Sea Wolf* is the latest and it comes from Stephen Hartley Computing — a company I've not heard of before.

The game involves stalking and eventually sinking a target ship with your submarine. There are both periscope and sonar displays and a large number of command keys. As a game, it has far more in common with *Flight Simulation* than *Space Invaders*.

The ship can respond to your attack with depth charges re-

quiring an immediate crash dive — it's exciting stuff.

Program Sea Wolf

FREUDIAN

If you are bored with cosmic battlecruisers, aliens and mega destruction, how about trying self sacrifice? In *Nursery Nightmare* your unending task is to pacify a crying baby by grabbing bottles of milk scattered about his nursery.

This seemingly simple objective is made difficult by the hostile nature of the baby's toys which seek to block your path. There are five screens of increasing difficulty and a baby whose oral fixation would surprise even Freud. Its machine code and the graphics are amusing.

Program Nursery Nightmare
Price £7.50

INTRIGUING

Cosmic Bounce is a far more ingenious game than its name suggests. While trying to wipe out assorted Doovries with your plasma cannon, you must

also protect your energy source in mid-screen. Since the energy source can be hit by both the Doovries, and your own rocket and plasma bolts, this is no simple task.

The graphics are, however, fairly basic — in fact, once your rocket is whizzing round the screen it more resembles a bluebottle than a plasma cannon. Sound effects, too, are of a standard "boom-boom" type. But, for all that, the game is utterly addictive.

Program Cosmic Bounce

ADRENALIN

Star Commando is a 'zap the aliens' game for the Commodore 64 with enough new features to make playing it worthwhile.

Aside from laser cannons and hordes of baddies there is a sort of *Star Trek* element to the game. You have maps of the universe divided into different segments and you have to warp back and forth looking for baddies and, from time to time, your Mothership.

Actually the fuel supply runs out rather quickly and finding the Mothership is the most nerve wracking, adrenalin inducing, part of the game.

The graphics are well done and each group of aliens moves in a different way. Another good Commodore game from Terminal.

TUTORIAL

Despite its title *The BBC Micro Compendium* contains neither 100 games nor a beginner's guide to Basic—in fact it is a fairly sophisticated tutorial on advanced uses for the machine.

This vast book begins with sections on assembly language programming and various kinds of arithmetic. These sections are well written and almost manage to make the subject sound un baffling.

Later sections are more specialised—and author Jeremy Ruston has designed two specialised languages called *Froth* (a kind of Forth) and *Slug*. These are used as a basis for a discussion on computer languages in general as well as being useful in their own right.

Finally you get a complete BBC Rom disassembly, fully annotated to explain what's going on. For some people it could be an essential purchase, others may be merely left baffled. It's expensive but full of information.

MANIC MICRO

It's usually an unmitigated disaster when computer writers try to be funny—they are usually only embarrassing.

So, a book that manages not only to be funny but also to convey useful information is a rare find.

Micromania surveys the whole computer field, from blasting aliens on cheapo micros to advanced word processing on expensive systems. From this sweeping vista a number of profound laws are discovered, most of which will ring horribly true to the most fanatical computer addict.

The book covers a vast range of topics and never fails to be both telling and funny. I had to wrench it from the sweaty hands of more than one member of Sunshine Inc to do this review. At £7.95 for a hardback, it's not bad value either.

This Week is a new section that covers all the new software coming on to the home micro market each week. All suppliers should send details of their new programs to: This Week, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

Software piracy rampant

Two years ago piracy in the video industry, was rampant. Nearly every video retailer stocked at least one product that was either a back-to-back copy he had made himself, bought at a very low cost, or a cheap 'off the back of a lorry' counterfeit, or was material that had not yet been officially released on video.

Most dealers did not feel that they were doing anything wrong — they were simply supplying what the public wanted with product that protected their margins. This attitude was reconfirmed by the derisory penalties received by the handful of dealers who were prosecuted — in general a maximum of £50 fine.

The video companies were bothered about piracy but were not willing to spend any money on long term solutions while business remained good and the market appeared to continue to grow. It was only when sales dried up that they realised that their livelihood was in danger and that they would have to invest in legal and legislative action if they were to stay in business.

Exactly the same thing is now happening to computer software. Although the number of dealers involved in product of a dubious nature is still much smaller, the software companies are beginning to notice the number of sales they are losing. Even the bigger companies are feeling

the pinch.

The Guild of Software Houses is becoming increasingly active in the battle against the software thieves, pursuing action on a number of fronts — some of which would be impossible to discuss without hampering the possible effect of the action. Many Government bodies are only too happy to help in protecting the industry's long-term interests. But it is not enough to secure conviction under existing law, because the penalties are not adequate, so the difficult problem of legislating change must also be dealt with.

A large number of computer industry groups are now pooling their resources to try to secure suitable protection for software houses by seeking amendments to the 1956 Copyright Act. The Government has already announced its intention to rewrite this legislation in order to bring it into line with the latter part of the twentieth century, but seems singularly inactive in doing so.

In the mid 1970's it set up the Whitford Committee to look at copyright reform — it reported its findings in March 1977. There then followed a lull of four years when the Government published a Green Paper, the equivalent of a discussion document. There has been much discussion since, but still no action.

One of the problems the Government faces is how restrictive copyright should be. Looking at games software for example — if one company has brought out a maze game, should all other companies be prevented from doing so? How similar can different games be without infringing one another's copyright? Should game copyright extend over all hardware formats regardless of whether the first company has any interest in putting its game out on other formats?

The difficulty comes in 'drafting the line'. If the same standards could be applied as for literature, then it would still be possible to develop a game type, without copyright infringement as long as an author is developing rather than simply ripping off a theme.

But the problem remains, will Judges — unable to distinguish *Culture Club* from, say, *The Beatles* — be able to rule upon obvious points of difference between games like *Zaxxon* and *Falcon Patrol*?

Nick Alexander

At odds

Puzzle No 99

"Every even number can be formed by adding together two odd number primes — counting 1 as a prime." Professor Hex paused to allow his students time to write this down.

"For example," he continued, "four is the sum of three and one. Some even numbers may be formed in more than one way." To illustrate this he wrote on the blackboard: $5 + 3 = 8$ and $7 + 1 = 8$.

"Can you tell me," he continued, "in the range of even numbers from 2 to 100, which number, or numbers, can be formed in the most possible ways?"

Can you work it out?

Solution to Puzzle No 94

The program calculates all squares that are equal to one less than the sum of two identical smaller squares.

```
10 LET A = 1
20 LET T = (2 * A * A) - 1
30 LET S = SQR(T)
40 LET B = VAL STR$(S)
50 LET C = INT S THEN PRINT A
60 LET A = A + 1
70 GOTO 20
```

There are an infinite number of these possible, but the first few numbers (representing the sides of the smaller squares) are: 1, 5, 29, 169, and 985. Of these only the answer given is in the correct range implied in the question.

The smaller tables each had 29×29 tiles on them, making 1682 tiles in all. If one tile is broken the remaining 1681 tiles can be re-formed into a 41×41 arrangement.

Winner of Puzzle No 94

The winner is: Hudson, Leyton Crescent, Bradford, W Yorks, who receives £10.

EASY CLAR AND UNCLE GROUCHO LOITER BY THE POOL AS THEY WAIT FOR THE PIMAN, WHOSE NEXT OLYMPIMANICAL EVENT IS THE BUTTERPI...

OH! I HEAR THE SPLAP-SPLAP-SPLAP OF UNSHOD FEET...

COR, THIS WATER'S LIKE ICE! DON'T TELL HIM, THOUGH... HE'S ONLY PRACTISED IN THE BATH-TUB SO FAR...

ENGINE

HOPE IN GOD

AM, YES — THE MAN FROM ATLANTA!

HI THERE, YOU GUYS!

AAAHIEEE

THAT SHE BLOWS

SPLUN

WHEEEEE

WAIT FOR IT...

OH, COME ON, IT'S NOT THAT COLD, IS IT?

YES, IT IS — AND MOREOVER, I'VE BEEN STUNG BY A JELLYFISH!

WHAT FLAVOUR?

COME ON THEN, START SWIMMING ABOUT, WHAT DO YOU THINK YOU'RE HERE FOR, A GAME OF CHESS?

NO SPITS OR BUBBLES FOR ME!

I'M NOT GOING ON WITH THIS JELLYFISH IN THE POOL, INDEED! WHAT'EVER NEXT?

WHAT'S THIS? "AL E. GATOR, PROFESSIONAL AQUATICS EVENT CANDIDATE INCENTIVE", EH?

RIGHT...

WORTHY FOR DISTANCE

Happy days and

Happy days and

I CHASED THE BRIGHT, ELUSIVE BUTTERPI OF LUNCH!

BEELIE

WON! 2-2 LEAD THIS OF THE POOL! WELL DONE

GARS!

AL'S WORKED HARD, TOO — GROUND THREW HIM A CABINET MINSTER!

NEXT... WEIGHTLIFTING...

I THINK YOU SHOULD SAVE THE WEIGHTLIFTING TILL LAST... I MEAN, YOU'VE ONLY GOTTA SNAP SOMETHING, AND...

AND I'M OUT OF IT ALTOGETHER! WELL, I HAVE HOPES!

TECHAH!

SCUSE! EVANS HERE! I WAS ASKED TO SAY THANKS TO ALL OF YOU WHO SENT IN PROGRAMS TO HELP US SPREAD PEACE AND JOY ACROSS THE PLANET, AND...

THANK! BEAT IT! AAAGH!

ALSO THANKS TO WESTER THE SOFTWARE WHOLESALES FOR DISTRIBUTING OUR PRODUCTS!

OH! I HEAR THE SPLAP-SPLAP-SPLAP OF UNSHOD FEET...

HELP! I'VE GOT THE PIMAN ON THE RAMPAGE!

SORRY — NO OUTRO — GOTTA DASH!
